/**
 * <p>Title: XML modelling of cogwheel phase cycling MQMAS sequence</p>
 *
 * <p>Description: The resulting XML document, called mqmas.xml, models
 * the three-pulse 3QMAS sequence applied to a spin I = 3/2 system.
 * The maximum value for the coherence order pAB between pulses A and B is 3.
 * The maximum value for the coherence order pBC between pulses B and C is 3.
 * The number of steps for the cogwheel phase cycling is N = 23 .
 * The winding number (windingA or wA) of pulse A is zero.
 * Those of pulses B (windingB or wB) and C (windingC or wC) are wB = wC = N.
 * </p>
